

PRESS RELEASE

Wheatstone Partners with ENCO to Provide AoIP Audio Delivery Systems

Southfield, Michigan, April 10, 2007: Wheatstone AoIP drivers will begin shipping to ENCO Systems for integration into their DAD audio automation and playout delivery systems for the radio and television industries. The AoIP driver can replace the use of sound cards in DAD workstations allowing cost savings and performance advantages when working with compatible Wheatstone gear.

ENCO's Vice President of Sales and Marketing Don Backus provided his views on the growing relevance of AoIP: "Our users value advanced technology, but they also value solid reliable engineering and design. The support of the Wheatstone AoIP driver within DAD can save customers money and reduce infrastructure costs. Wheatstone and ENCO share many core values regarding product quality, performance and value and we welcome this opportunity to work closely with Wheatstone on yet another level."

The Wheatstone AoIP driver is an efficient and cost effective way to transport audio to and from an audio delivery system over an Ethernet network, eliminating the need for expensive audio cards while providing greater flexibility.

Gary Snow, President of Wheatstone Corporation, commented on the partnership: "This is a step forward in our relationship that we know our customers will immediately benefit from. We're looking forward to the next era in broadcast; AoIP and TCP/IP control are just two of the latest developments with our technology. We value the ability to work with other market leaders like ENCO to fully implement this technology in the field."

About ENCO (www.enco.com)
